## 장고(Django)로 사용자관리 만들기

Part 4. 로그인과 Session변수

COP실전학습용 – www.globalintelligence.kr

실전학습 참여 문의 : songpanet@naver.com

## 로그인과 Session 적용

## < 로그인 로직 >

```
if 'member_no' in request.session:
                                       Session에서 member_no 확인
   rsTmp = Member.objects.filter(member_id=memberid, member_pwd=memberpwd)
   if(len(rsTmp)) == 0:
                                             Member 에서 확인
                                            없으면 에러 flag = '1'
                                           있으면 정상 flag = '0'
       rsMember = Member.objects.get(member_id=memberid, member_pwd=memberpwd)
       memberno = rsMember.member_no
       membername = rsMember.member_name
       rsMember.access_latest = datetime.now()
       rsMember.save()
                                        Access latest 필드 업데이트
       print(membername)
       request.session['member_no'] = memberno
       request.session['member_name'] = membername
                                              Session변수 설정
return JsonResponse(context, content_type="application/json")
```
